Infection rate

ALASKA

On average, each person in Alaska with COVID is infecting 1.24 other people. As such, the total number of active cases in Alaska is growing at an unsustainable rate. If this trend continues, the hospital system may become overloaded. Caution is warranted.

Last updated 6/12/2020. Each data point is a 14-day weighted average. We present the most recent seven days of data as a dashed line, as data is often revised by states several days after reporting. Learn more about our methodology and our data sources.
